

## Hynix Semiconductor uses the Somansa Mail-i to protect its valuable data and manage branch and overseas offices

Hynix Semiconductor is a leader in the memory semiconductor industry including DRAM and NAND Flash and now growing into the total semiconductor device provider by diversifying the business. With its U.S. headquarter office located in San Jose, California, Hynix Semiconductor America is pioneering in the of semiconductor technology with technological expertise and continuous the industry's investment efficiency, Hynix has proven its becoming the world's 6th largest semiconductor manufacturer in 2007.

As a publicly traded company with offices around the world, Hynix is required to meet government regulations such as e-Discovery and protect confidential data from leakage.

After evaluating several other solutions, Hynix selected the Somansa Mail-i to manage and protect confidential company electronic messages and meet requirements for e-Discovery. "Initially we were looking for a solution that could manage and protect our electronic data from leakage. After evaluating the Somansa Mail-i, we learned that the product met the requirements of other security and compliance needs including e-Discovery and regulations both here in the U.S. and Korea. Somansa Mail-i was able to not only monitor and archive corporate MS Exchange email but, also webmail, IM and other protocols. Using the central management function of Somansa Mail-i, the corporate office is capable of receiving the archived message logs from its overseas and branch offices. Archived messages can be retrieved and viewed in native languages English, Korean, Spanish, Chinese, etc. Somansa Mail-i provided a total security and compliance solution that met all of our needs" said H.S. Cho, Network Manager for Hynix America.

Using Somansa's Mail-i, Hynix protects its confidential company data supporting over 90,000 worldwide employees. Somansa Mail-i secures Hynix's data by monitoring and archiving all outgoing electronic messages including corporate email including MS Exchange, web-based email, instant messenger, FTP, and P2P protocols. Once a Mail-i policy is violated, administrators are immediately alerted. All of Hynix's electronic messages including attached files are archived and retrievable using Mail-i's quick search option to comply with federal and industry regulations and e-Discovery rules.

### Product:

- Somansa Mail-i

### Mail-i Benefits:

- Comply with e-Discovery
- Secure sensitive company data and customer information
- Manage messages containing confidential information at overseas and branch offices

### Why Mail-i?

- Met data security and e-Discovery needs.
- Easy to use all-in-one
